Preliminary Testbeam Results

- **Nominal operating parameters:**
  Ar:CO_2(93:7) at 3 bar, gas gain $2 \cdot 10^4$ at 3080 V.
- **Space-drift time relationship from calibration with silicon strip detector telescope (1999 data) with autocalibration corrections (2001 data).**
- **Drift tube resolution as a fct. of drift distance determined from track fit through 5 out of 6 layers.**
